HE REPLY FILED 16 July 2007 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.							
☑ The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:							
The period for reply expiresmonths from the mailing date of the final rejection. The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In							
no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN							
TWO MONTHS OF THE FINAL REJECTION. See MPEP 7	06.07(f).						
Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee may be been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
The Notice of Appeal was filed on A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).							
AMENDMENTS	within the time period decreation in e	,, 0, 1, 1,,0, (0,,					
The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, will <u>not</u> be entered because (a) They raise new issues that would require further consideration and/or search (see NOTE below); (b) They raise the issue of new matter (see NOTE below); (c) They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for							
appeal; and/or (d) They present additional claims without canceling a

Continuation of 3. NOTE: The amendment to claim 1 sets forth new language that requires further consideration and search.

Continuation of 11, does NOT place the application in condition for allowance because:

Since the amendment will not be entered, Applicant's arguments with respect to amended claim 1 are moot.

In regards to claim 14, Applicant argues that Moore does not teach, disclose or suggest a body member with integral first and second check valves. Instead, Applicant alleges that Moore teaches a body member with remote check valves. In response, it is respectfully submitted that claim 14 requires a body member having two input ports, wherein each input port includes a valve integrated therein. The claim language does not require that the check valves be integral with the body member. Moore discloses a body member (11) having two inputs ports (33). Each input port has a check valve that is integrated within the respective input port as required by the language in claim 14.

In regards to claims 3 and 16, Applicant argues that defining the spring into the term valve member is an improper retrospective reconstruction of the teaching of Moore. However, Applicant admits that Moore teaches a valve member (disc 31) biased into position by a spring (25). It is respectfully submitted that a valve member biased into position by a spring is sufficient to read on a broadest, reasonable interpretation of a "resiliently compressible valve member" as claimed.
